ABOUT

AI and machine learning enthusiast with hands-on experience developing end-to-end ML and Generative AI applications using FastAPI, PyTorch, and LLM APIs. Experienced in building classification models, AI-powered automation systems, and scalable backend services with a strong interest in solving real-world problems.

EDUCATION

Jaypee University of Information Technology <i>B-Tech in Computer Science and Engineering (Artificial Intelligence and Data Science)</i>	Solan, Himachal Pradesh <i>Jul 2023- Jun 2027</i>
Bright Angels School <i>Class XII: 81.4</i>	Dehradun, Uttarakhand <i>Jul 2022 - May 2023</i>

EXPERIENCE

Machine Learning & Generative AI Projects <i>Self-Initiated Projects</i>	2024 – Present
- Built and deployed end-to-end machine learning classification models, including insurance premium categorization, using Python, Pandas, Scikit-learn and PyTorch - Performed data preprocessing, feature engineering, model training, evaluation, and hyperparameter tuning to improve model performance and generalization - Developed and deployed machine learning and Generative AI-powered backend services - Designed and integrated LLM-based workflows using the OpenAI API for automation, resume analysis, and AI-driven scoring systems	

PROJECTS

AI-Powered Order Management System <i>Python, FastAPI, LangChain, LangGraph, React</i>	Mar 2026
- Built an AI-powered e-commerce platform with FastAPI, React, and SQLAlchemy for real-time order and incident management. - Developed an incident detection engine to detect and classify order anomalies and generate root-cause analysis and actionable recommendations. - Created a LangChain + LangGraph chatbot for natural language querying of live order and analytics data. - Designed a modular React + Tailwind dashboard for orders, incidents, and AI chat management.	
Deep-Fake-Detection <i>Python, PyTorch, ResNet-18, FastAPI, Streamlit, Docker, AWS Lambda</i>	April 2026
- Built a binary image classification system using fine-tuned ResNet-18 to detect AI-generated deepfake images, achieving 96%+ test accuracy on a dataset of 12,900+ real and GAN-generated images. - Implemented group-based train-test splitting to eliminate augmentation data leakage, ensuring honest model evaluation across unseen base images. - Designed a production-ready REST API using FastAPI with image preprocessing pipeline and dynamic label-map inference, containerized with Docker using CPU-optimized PyTorch for AWS Lambda compatibility.	

TECHNICAL SKILLS

Languages: Python, JavaScript, C++, SQL
Frameworks: FastAPI, Streamlit, React, PyTorch, Scikit-learn, NumPy, Pandas
AI / GenAI: LangChain, LangGraph, Agentic AI, RAG (Retrieval-Augmented Generation), Vector Databases
ML Concepts: Neural Networks, Transformer Architecture, NLP, Hyperparameter Tuning
Developer Tools : Git, GitHub, Docker, Jupyter Notebook, SQLAlchemy, REST APIs, Microsoft Excel, Power BI
